Clinical and Operative Experience:
In my country Iraq, orthopedic surgery has not come into subspecialties; the specialist has to deal and treat almost all cases presented to him, the hospitals where I served are general and the prolonged situation of war in the last decades directed me to gain experience in the management of open injuries of limbs, and trauma in general. I have become more interested in upper limb and hand orthopedic conditions after I fellow my supervisor Mr.Muhammed Ali Fathel FRCS> orthopedic surgeon consultant. And many a plastic surgeon and I worked together in conjoined Hand clinic in Al- Wasity hospital; many of the patients are pediatric. I have done a vast number of operations of reductions and internal fixation, external fixation of long bones, joints and bones of the hand. I have done and participate in many operations of peripheral nerve repairs and tendon transfer to balance deformed joints in conditions like poliomyelitis, cerebral palsy and post traumatic conditions of peripheral nerves.
