Biohazard Symbol

The term "biohazard" for the purpose of this symbol is defined as "those infectious agents presenting a risk or potential risk to the well-being of man, either directly through his infection or indirectly through disruption of his environment." The symbol is **a fluorescent orange or an orange-red color**.

In 1966, Charles Baldwin develops the Biohazard Symbol to warn people of infectious agents.

Symbol to be memorable but meaningless" so it could be learned.

Laboratory Safety Symbols

It is a group of colors and shapes it is placed on all materials, equipment, devices and also some food materials.

Every color and shape represent a characteristic if the item.

Like red color, yellow color, green color, blue color.

Laboratory Safety Symbols:
